

CE mark

The CE mark is part of the European Union policy of establishing pan-European standards for implementation in the EU market.

The Construction Products Directive 89/106/EEC applies to all construction products that are produced for, or incorporated within, Europe's building and civil engineering construction works.

CE marking for products falling under this Directive is a legal requirement for manufacturers selling their products in Europe.

CONSTRUCTION PRODUCTS DIRECTIVE 89/106/EEC

HEALTH, SAFETY AND ENVIRONMENTAL LEGISLATION QUALITY CERTIFICATION

Serving Irish and European markets and working only with carefully selected premium suppliers from around the world, IPL group is at the forefront of global solutions and best practice in the marketplace. Alongside other directives, the Construction Products Directive (CPD) helps to realise the European single market by setting standards that promote free trade within the EU. As leaders in infrastructure management and maintenance solutions, we have introduced this additional standard to our product range and continue to welcome all efforts to help customers achieve consistent quality and competitive supply. IPL group's CE marking of ORBITAL access covers and gratings documents our compliance with EC Council Directive 89/106/EEC, which is effective in Ireland and all of Europe.

CE marking on all ORBITAL access cover and grating is IPL group's declaration that the product conforms with the essential requirements of European health, safety and environmental protection legislation. It is in addition to European Product Standard EN124 which outlines the important controls for definitions, classes, materials, design and testing requirements along with necessary marking and quality control.

All ORBITAL access covers and gratings hold the KITMARK for EN124 certification and are CE marked alongside this information on the castings, on packaging, in brochures etc.

Kitemark

ORBITAL access covers and gratings have KITEMARK or LRQA certification to EN124 standard. This includes all manhole covers and gully tops (with clear opening up to and including 1000mm) for installations within areas subjectd to pedestrian and/or vehicular traffic. These products are rigorously tested for materials, design, construction, function, dimensions and markings.

Advice on product specification and EN124 Standard is available from IPL group. Please see the complete ORBITAL brochure for further information.

For customers, CE marking identifies products with uniform quality based on the manufacturer's internal production control. IPL group is registered and certified to ISO 9001 and BS 8555 for quality and environmental management systems. Furthermore it is our policy to conduct stringent quality control of all our foundries and suppliers ensuring they meet ISO 9000 standards.
